

Resiliency & Sustainability Summary

In order to be considered for this award, proposals must include a 1–2-page summary highlighting the building's current sustainability and resiliency attributes, as well as planned upgrades to address energy efficiency, reducing carbon emissions and combating climate change.

Items to consider:

- LEED or other “Green Building” certification
- Energy Efficiency Ratio/Rating or Energy Star score
- Measures that have been taken to reduce energy consumption in the building
- Measures that have been implemented to ensure/improve air quality in the building
- Public transportation options, onsite bike parking facilities, and electric vehicle (EV) charging stations
- Availability of space/infrastructure for installation of charging stations for electric vehicles
- Onsite renewable energy generation, a “green” roof, participation in a community solar program or other initiative
- Resiliency measures in effect to mitigate effects of flooding or other natural disasters
